Fund Manger's Commentary

Indian equity markets remained range-bound during the month, albeit with a negative bias in the second half, as the Nifty Index drifted toward the lower end of its recent trading band. The broader market continues to await a decisive move in either direction. Market leadership shifted during the month, with factors linked to earnings growth and momentum outperforming, while traditionally defensive factors such as quality, dividend yield, and low volatility lagged. This marked a sharp reversal from the previous month and highlights the ongoing factor rotation within the market.

During the month, approximately 46% of the portfolio was allocated to the collar strategy, 20% to arbitrage opportunities, 5% to tactical trades and special situations, and 30% to debt investments. Asset allocation remained broadly unchanged from the previous month, reflecting the continued range-bound nature of the market.

Within the special situations segment, the risk-reward profile of certain opportunities has become less attractive. As increasing amounts of capital have pursued a limited opportunity set, the discounts available in several transactions have narrowed materially. We have consciously remained disciplined and avoided such trades where the compensation for risk appears inadequate, as preserving the portfolio's risk-adjusted return profile remains a key priority.

On the fixed-income side, portfolio positioning remained largely unchanged. Exposures to Treasury Bills/Government Bonds and Corporate Bonds remained broadly balanced and at levels similar to the previous month.

The portfolio delta was maintained within the 20% to 25% range throughout the period. Consistent with the fund's design and investment objective, the fund generated positive returns despite broader market weakness during the month, demonstrating the resilience and stability of the underlying investment strategy.

Views expressed by the Fund Manager cannot be construed to be a decision to invest. This is the current investment framework which may or may not change in the future these are based on the Fund Manager's outlook in accordance with the Scheme strategy

Taxation of Platinum SIF Strategies for FY 2026-27 is as follows:

Sr No.	Platinum SIF Strategies	Asset Class	Period of Holding	Long-Term	Short-Term
01	Platinum Hybrid Long-Short Fund	Equity Oriented SIF (>=65% Equity)*	>12 Months	12.50%	20%

*Annual LTCG exemption of 1.25 Lakhs for equity & equity oriented funds

As per section 76(5) (b) of the Income-tax Act, 2025 ('the Act'). Specified scheme means scheme by whatever name called, which invests more than 65% of its total proceeds in debt and money market instruments or a fund which invests 65% or more of its total proceeds in units of such schemes.

For this purpose "debt and money market instruments" shall include any securities, by whatever name called, classified or regulated as debt and money market instruments by the SEBI.

^ In case of Listed schemes

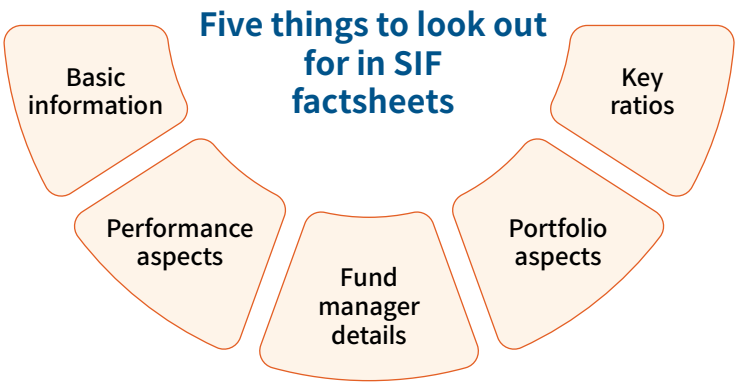
Note : Investors should consult their tax advisers before making any decision

HOW TO READ A SIF FACTSHEET?

Know how your money is managed

The benefits of investing in SIF are well known. However, buying them on face value is not enough. Investors should know how their money is managed. They should research as much as possible on a Fund's strategy, performance, risks involved and how the money is invested. Many investors shy away from this exercise as they consider it cumbersome. To make life easy for investors, SIF disclose a fund factsheet which details the quintessential information required before investing.

The factsheet is a concise document with a plethora of information about how the fund is managed; it is disclosed on a monthly basis. This article tries to decode the factsheet and explains how investors should use it for making investment decisions.



Basic information

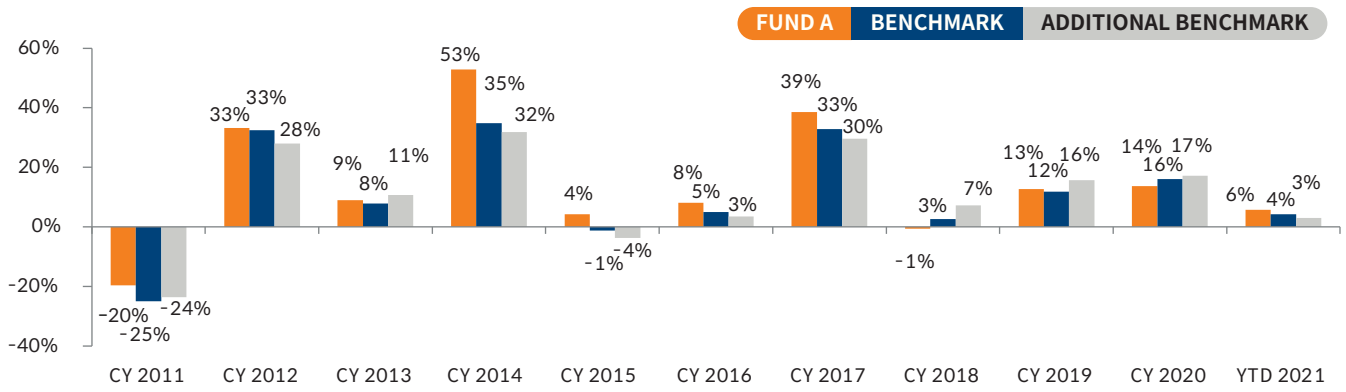
The factsheet provides all the general information on the fund – its objective or philosophy, options (growth or dividend), plans (direct and regular), net asset value (NAV) of each plan, minimum investment amount, systematic features (SIP, SWP, STP) and assets under management (AUM) data.

It is important to know about the scheme's exit load, as it gets deducted from total gains if the investor exits during a specific period after investment. It is a small penalty charged on prevailing NAV to discourage premature redemption. Different Funds have different exit loads, Some funds have a fixed exit load and some have a tiered structure. For instance, a fund may have nil exit load if the investor withdraws up to 10% of units per year. For units more than 10%, it charges 3% for exit before 12 months, 2% for exit before 24 months, 1% for exit before 36 months and nil after that.

Investors should look out for the fund's product labeling and Risk Band. Product labeling underlines product suitability for Fund Portfolio investors. It tells about ideal investment time frame required to manager ratios aspects details benefit from the fund and where it invests. Risk Band is a presentation that helps investors measure the risk associated with the fund. It presents Risk Level 1 to 5 - Since an equity fund typically has high risk involved, needle of the scale points towards moderately high /high, suggesting the fund is meant for investors with a high risk-taking appetite. Examples of equity and liquid funds are listed below:

Performance aspects

Although the past performance does not guarantee future trend, investors can get a broad idea on how a fund may perform in future. This section looks at the fund's performance (lump sum as well as SIP) across time frames and compares it with the fund's benchmark and a market benchmark. Many fund houses provide graphical representation of calendar year performance of funds along with standard SEBI prescribed performance tables.



The data used is for illustration purpose only.

Fund manager details

In an investment voyage, SIF is the ship and fund manager is the sailor. Success of the voyage depends on the manager's expertise. Hence, it is imperative to know the fund manager well.

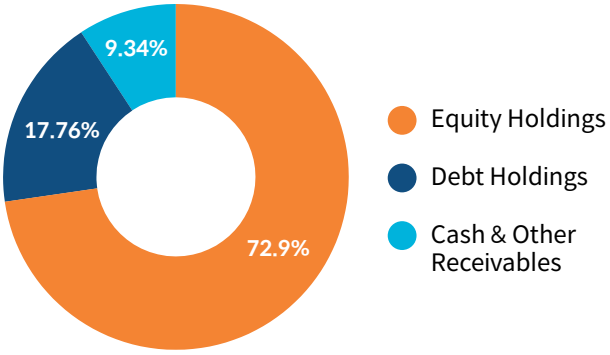
The factsheet provides information on the manager's experience and qualification. You can find out their track record by reviewing the performance of all Funds managed by them.

Portfolio aspects

Key portfolio attributes to look for in equity/ hybrid funds

ASSET ALLOCATION

It highlights the exposure to different asset classes - equity, debt and cash - in a portfolio.



The data used is for illustration purpose only

COMPANY AND SECTOR ALLOCATION

It informs investors about a fund's concentration level in sectors and stocks. An aggressive fund manager may have high concentration among fewer companies and sectors, which may not be appropriate for investors seeking diversification. Investors should check whether the fund has taken higher-than-prudent exposure to risker sectors or low quality stocks.

P ortfolio Top 10 holdings % Allocation

The data used is for illustration purpose only.

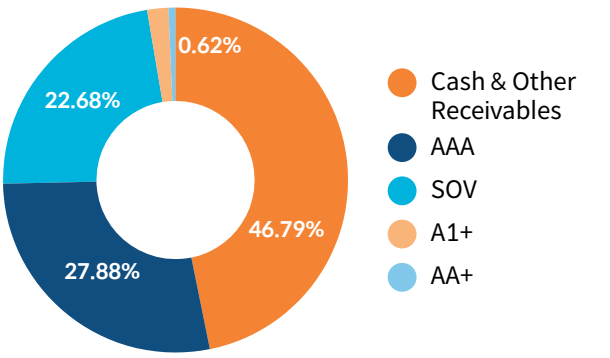
Key portfolio attributes to look for in debt funds

CREDIT QUALITY PROFILE

A debt fund's holdings are classified according to its credit ratings such as AAA, AA+, A1+ (given by credit rating agencies), etc.

Funds with higher exposure to AAA (top rated long-term debt) and A1+ (top rated short-term debt) have lower credit risk and higher credit quality.

Conservative investors should check whether the fund manager in order to boost performance is taking undue exposure to lower rated debt papers as they typically trade at higher yields but are exposed to high credit and liquidity risk vis-à-vis top rated papers.

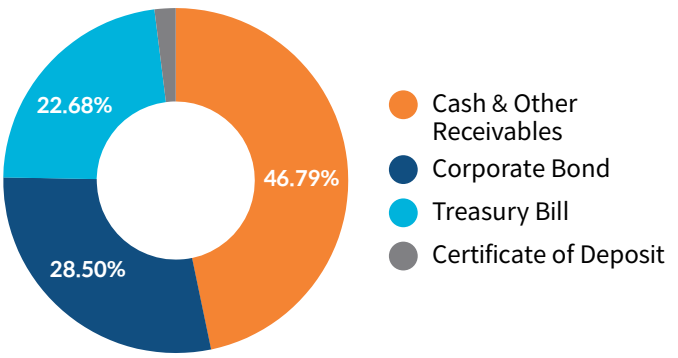


The data used is for illustration purpose only

INSTRUMENT BREAK-UP

It highlights allocation to various debt instruments such as commercial papers (CPs), certificate of deposits (CDs), NCDs and bonds, gilts and cash equivalents.

Investors in shorter maturity debt funds such as liquid, ultra short term, short- term debt funds should check whether higher proportion has been allocated to shorter maturity instruments such as CPs and CDs. As long-term debt instruments such as gilts and bonds are typically more sensitive to interest rate changes compared with CPs and CDs, higher exposure to former instruments by liquid or ultra-short term may result in high risk.



The data used is for illustration purpose only.

GLOSSARY

Average Maturity:

Average Maturity of the securities in Fund

Beta:

Beta of a portfolio is a number indicating the relation between portfolio returns with that of the market index i.e. it measure the volatility, or systematic risk, of a portfolio in comparison to the market as a whole.

Indexation Benefit:

- Long Term Capital Gains (holding period of over 3 years) from other than equity oriented and specified SIF are taxed at 20% plus applicable surcharge and cess with the benefit of indexation.
- Government notifies Cost Inflation Index (CII) for each financial year taking into consideration the prevailing inflation levels.
- The cost of acquistion for computation of tax is adjusted for inflation using CII, there by reducing the capital gains from tax perspective.

Macaulay Duration (Duration):

Macaulay Duration (Duration) measures the price volatility of fixed income securities. It is often used in the comparison of interest rate risk between securities with different coupons and different maturities. It is defined as the weighted average time to cash flows of a bond where the weights are nothing but the present value of the cash flows themselves. It is expressed in years/days. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero coupon securities where they are the same.

Modified Duration:

A formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration of portfolio can be used to anticipate the change in market value of portfolio for every change in portfolio yield.

Portfolio Turnover Ratio:

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

Portfolio Yield (Annualized Portfolio YTM*):

Weighted average yield of the securities in Fund portfolio. *In case of semi annual YTM, it will be annualized.

Risk Free Return:

The theoretical rate of return of an investment with safest (zero risk) investment in a country.

Specified Mutual Fund:

"Specified Mutual Fund(s)" means mutual fund Fund(s) in which investment in equity shares of domestic companies does not exceed thirty-five percent (35%) of the total assets of such Fund(s).

Standard Deviation:

A statistical measure that defines expected volatility/risk associated with a portfolio. This explains the variation/deviation from the average returns delivered by the portfolio. A higher standard deviation means higher volatility (risk) and a lower standard deviation means lower volatility.

Base Expense Ratio:

BER denotes annualized asset management and other operational fees. Transaction brokerages, regulatory fees, and statutory taxes (including GST, STT, and Stamp Duty) are charged separately to the strategies on an actual's basis, they are not included in the Base Expense Ratio percentage displayed herein
